

Koger Sunshade Products

We have basically **6 standard shades**. They are, from smallest to largest...

Shades that attach directly to the glass canopy with double stick tape:

Small: 25" long X 30" wide. Tapered in front.

Wide: 25" long X 34" wide. Tapered in front.

Extended WIDE: 35" long X 34" wide. Longer shade to shield your panel better when the aircraft is parked. Tapered in front.

Large: 35" long X 34" wide. For aircraft with large canopies. Tapered in front.

RV-4, RV-8: 45" long X 15" wide. This shade is designed for 2-place tandem seat aircraft. It's long and skinny.

Our **Super Slider** is the shade for aircraft that have a metal tube running fore and aft down the center of the canopy. Named originally for the RV series of sliding canopies, it works for several other aircraft with center tubes.

Super Slider: 35" long X 34" wide, tapered at the rear to follow the canopy shape. Attachment is with small flat-head screws to the center tube.

The spreadsheet below details which shade should fit your aircraft. If you don't see your plane here, give us a call; we most likely can make one specifically for you.

IF YOU DO NOT SEE YOUR AIRCRAFT LISTED MOST LIKELY WILL USE ONE OF OUR 'CUSTOM' SUNSHADES
